Office Action Summary

Application No.

10/770,642

Applicant(s)

MCNULTY, PETER C. 

Examiner

Thanh X. Luu

Art Unit

2878

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-45 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 1-45 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☒ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 03 February 2004 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. ____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Specification

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1, 2, 4-9, 11, 13, 14, 16-23 and 25-30 are rejected under 35 U.S.C. 102(b) as being anticipated by Wilder et al. (U.S. Patent 5,262,871).

Regarding claims 1, 2, 4-9, 11, 13, 14, 16-23 and 25-30, Wilder et al. disclose (see Fig. 1) a circuit comprising: a decoder (12, 14) for receiving an address within an address space of a processor (18) and for accessing a pixel in an active pixel sensor (10) based on the address, wherein the decoder maps the active pixel sensor array to the address space. Wilder et al. also disclose (see Fig. 1) the decoder converts the address into a row and column signal as claimed; and a module (see Fig. 15; amplifiers G) to correct for a gain of the pixel. Furthermore, the sensor array senses an image and is capable of tracking a target as claimed. That is, the intended use of the interface

adds no structural limitation to the claim. Wilder et al. also disclose (see Figs.) the pixel circuit is one of a plurality of pixel circuits and the interface provides a signal to simultaneously extract charges as claimed and the pixel circuits form a row; and summing the charges (see Fig. 14).

4. Claims 22, 26-29 are rejected under 35 U.S.C. 102(e) as being anticipated by Canini et al. (U.S. Patent 6,512,218).

Regarding claims 22, 26-29, Canini et al. disclose (see Fig. 6) an interface comprising: a module (10, 30) that enables a processor (3) to access a pixel circuit in an active pixel sensor array (5) by direct memory access (DMAC 30). Canini et al. also disclose the pixel circuit is one of a plurality of pixel circuits and the interface provides a signal to simultaneously extract charges as claimed and the pixel circuits form a row. Furthermore, the sensor array senses an image and is capable of tracking a target as claimed. That is, the intended use of the interface adds no structural limitation to the claim.

5. Claims 22, 25-29 are rejected under 35 U.S.C. 102(e) as being anticipated by McGrath et al. (U.S. Patent Application Publication 2002/0074481).

Regarding claims 22, 25-29, McGrath et al. disclose (see Fig. 5) an interface comprising: a module (171, 173) that enables a processor (150) to access a pixel circuit in an active pixel sensor array (117) by direct memory access (DMA 173). McGrath et al. also disclose the pixel circuit is one of a plurality of pixel circuits and the interface provides a signal to simultaneously extract charges as claimed and the pixel circuits form a row. Furthermore, the sensor array senses an image and is capable of tracking

a target as claimed. That is, the intended use of the interface adds no structural limitation to the claim. McGrath et al. also disclose (see Fig. 2) a module for correcting for offset or gain (60).

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 24 and 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Canini et al.

Regarding claim 24, Canini et al. disclose the claimed invention as set forth above. Canini et al. do not specifically disclose a module for receiving a start and end address as claimed. However, Canini et al. do teach (see col. 7, lines 35-40) obtaining windows or a rectangular portion of the image. Windowing inherently would include generating and receiving start and end addresses of the window for readout. Thus, it would have been obvious to a person of ordinary skill in the art at the time the invention was made implement windowing and have a module as claimed in the apparatus of Canini et al. to improve throughput or reduce processing for the entire frame.

Regarding claim 25, Canini et al. disclose the claimed invention as set forth above. Canini et al. do not specifically disclose a module for correcting for a gain of the pixel circuit. However, Canini et al. do teach (see Fig. 8) providing automatic gain control to improve imaging. Thus, it would have been obvious to a person of ordinary

Art Unit: 2878

skill in the art at the time the invention was made to correct for gain as claimed in the apparatus of Canini et al. to improve imaging as taught.

8. Claims 3, 12, 15, 32-39 and 42 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wilder et al. in view of Canini et al.

Regarding claims 12, 32-34, 36-39 and 42, Wilder et al. disclose the claimed invention as set forth above. Wilder et al. do not specifically disclose an A/D converter. Canini et al. teach (see Figs.) an A/D converter for representing a charge read from a pixel as a digital value. It would have been obvious to a person of ordinary skill in the art at the time the invention was made to provide such an A/D converter in the apparatus of Wilder et al. in view of Canini et al. for faster and improved digital processing.

Regarding claims 3, 15 and 35, Wilder et al. disclose the claimed invention as set forth above. Wilder et al. do not specifically disclose a module for receiving a start and end address as claimed. However, Canini et al. do teach (see col. 7, lines 35-40) obtaining windows or a rectangular portion of the image. Windowing inherently would include generating and receiving start and end addresses of the window for readout. Thus, it would have been obvious to a person of ordinary skill in the art at the time the invention was made implement windowing and have a module as claimed in the apparatus of Wilder et al. in view of Canini et al. to improve throughput or reduce processing for the entire frame.

9. Claims 10 and 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wilder et al. in view of Rathi (U.S. Patent 5,296,852).

Regarding claims 10 and 31, Wilder et al. disclose the claimed invention as set forth above. Wilder et al. do not specifically disclose comparing the sum to determine whether a target image is represented as claimed. Rathu teaches (see abstract and Fig. 5) summing pixel values and comparing to a threshold value to determine whether a target image is represented. Thus, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to provide such a comparison in the apparatus of Wilder et al. in view of Rathu as desired for image recognition.

10. Claims 41 and 43-45 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wilder et al. in view of Canini et al. and Metcalfe et al. (U.S. Patent 6,825,936).

Regarding claims 41, 43 and 44, Wilder et al. disclose the claimed invention as set forth above. Wilder et al. do not specifically disclose sub-frames and different integration times as claimed. Metcalfe et al. teach (see Fig. 5 and col. 8, lines 35-40) sub-frames of pixels having different integration times. Furthermore, choosing to overlap frames requires only routine skill in the art. Thus, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to provide such a configuration in the apparatus of Wilder et al. in view of Canini et al. and Metcalfe et al. as desired for more dynamic imaging.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thanh X. Luu whose telephone number is 571-272-2441. The examiner can normally be reached on M-F 6:30AM-4:00PM.

11. If attempts to reach the examiner by telephone are unsuccessful, the examiner's

Art Unit: 2878

supervisor, Dave Porta can be reached on 571-272-2444. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
